

# Linked, self-steering logistics based on CPS

**Dipl.-Wirtsch.-Ing.  
Julian Popp,**  
Institute of Mechanical  
Handling and Logistics,  
University of Stuttgart

## Automotive production changed (regarding product variation) over the last 40 years

1970

2010

## Material provision 20 years ago

Quelle: Porsche 1992

## Material provision today using logistic supermarkets

## Tugger trains connecting supermarkets and assembly

Lack of flexibility regarding routes!

## Problem analysis for today's premium automotive production

- Further rise in number of variants
- Expensive rework and little flexibility because of fixed conveyor lines
- Logistics need higher amount of space at the assembly lines

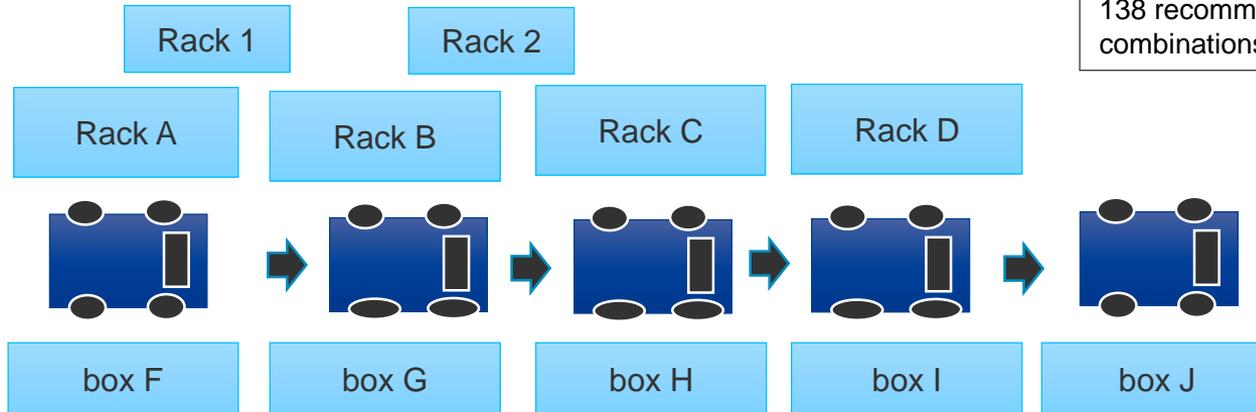

→ Logistics costs rising continuously

Image source: Mercedes-Benz

2013 Mercedes A-class (W 176):

138 recommended paint & upholstery combinations

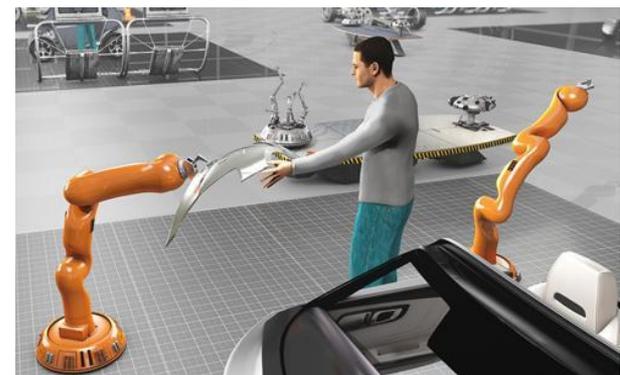

## ARENA2036

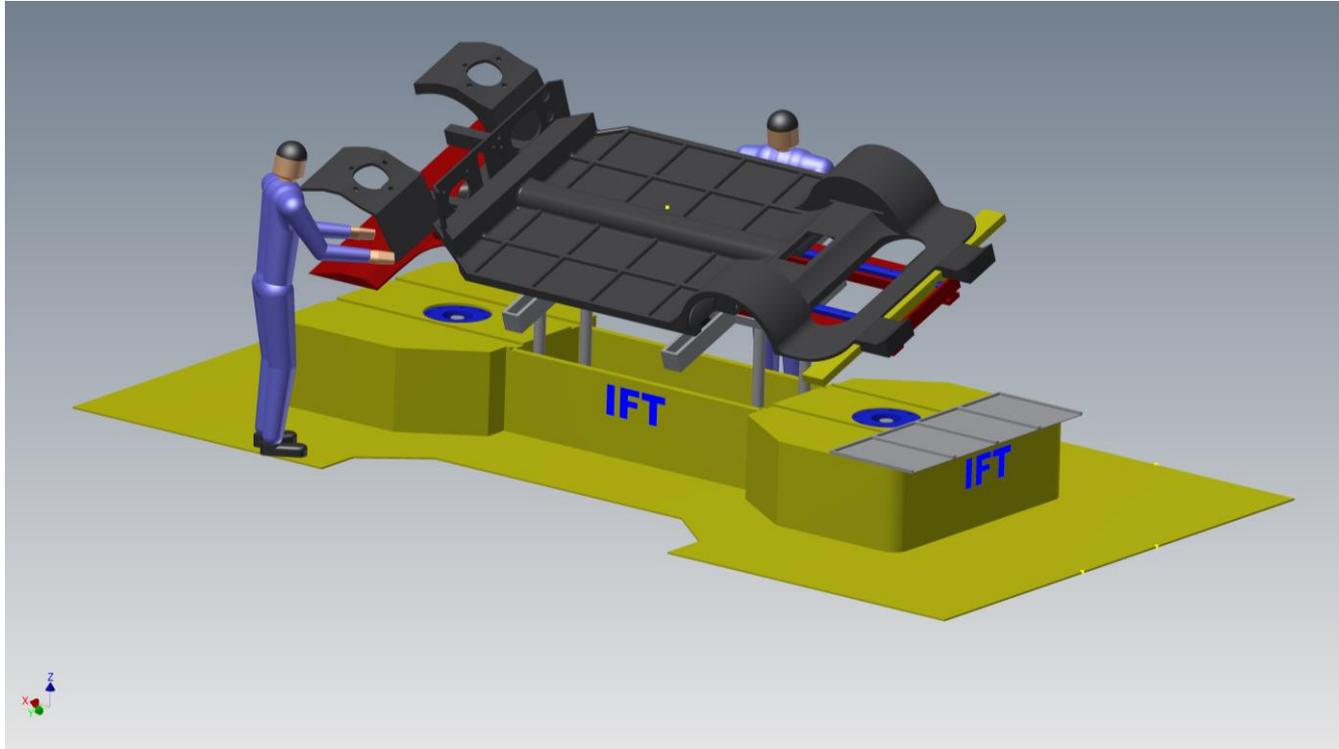

Active Research Environment for the Next Generation of Automobiles

- 7500 m<sup>2</sup> testing hall in Stuttgart
- Flexibility and transformation ability
- Human machine interaction
- Partners: Daimler, Bosch, BASF, Faro, Kuka, Bär, Fraunhofer (IAO, IPA) and 6 Institutes of the University of Stuttgart

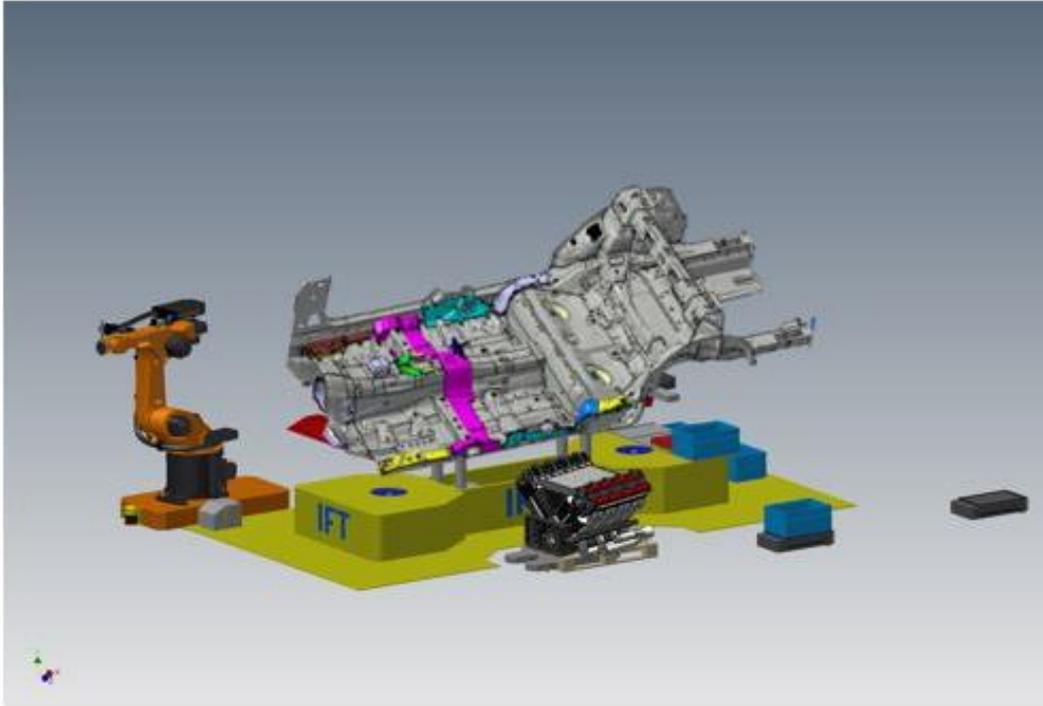

## Innovative worker platform (AGV) to replace conveyors

## Material supply for worker platform (AGV)

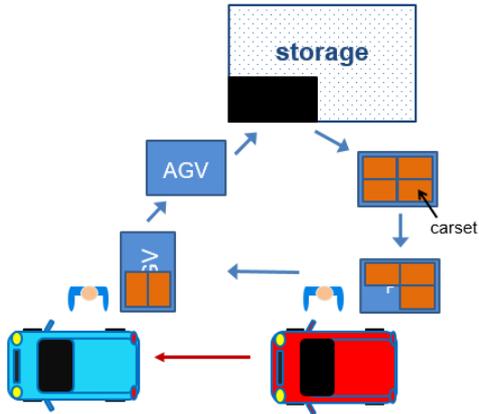

### Connection points:

- Roboter
- Wire mesh boxes
- Universal bins
- Additional manual worker space
- ...

## Three innovative logistics concepts

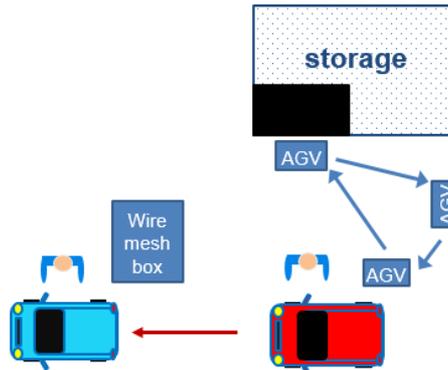

### Car-set concept:

*Main criteria:*  
High number of variant parts  
at following stations

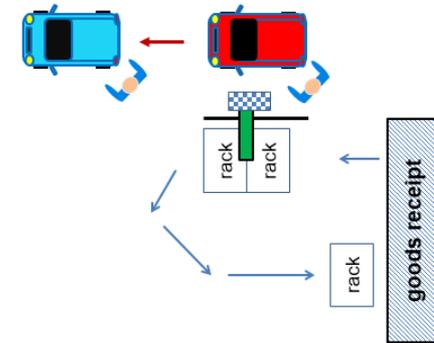

### AGV-concept

*Main criteria:*  
Parts for small  
percentage of cars

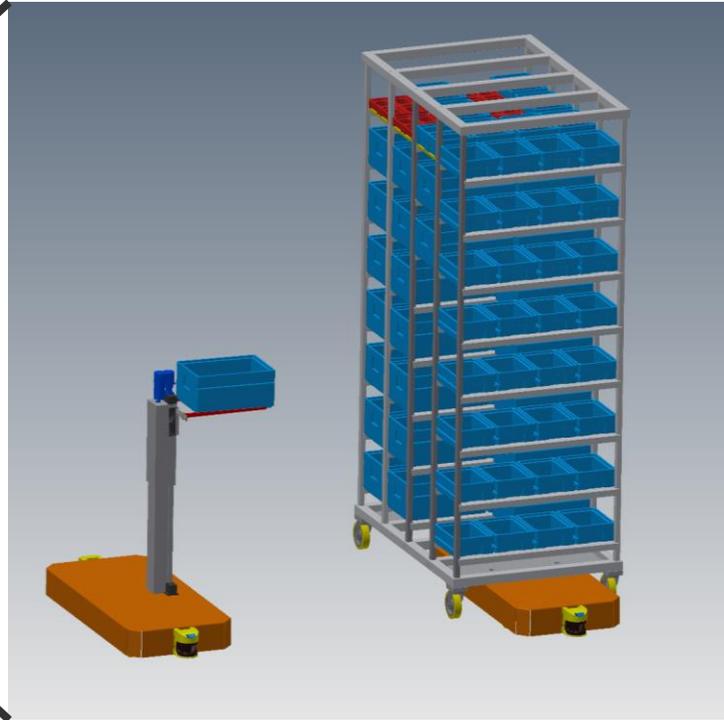

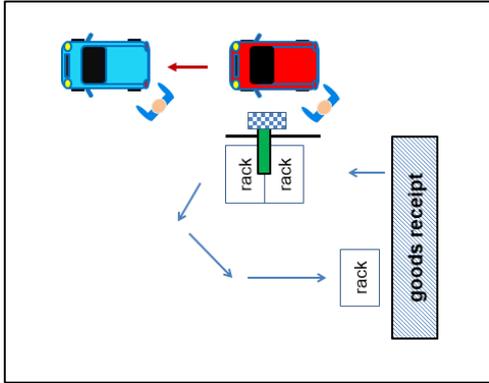

### Rack-concept

*Main criteria:*  
High number of variant  
parts at a certain station

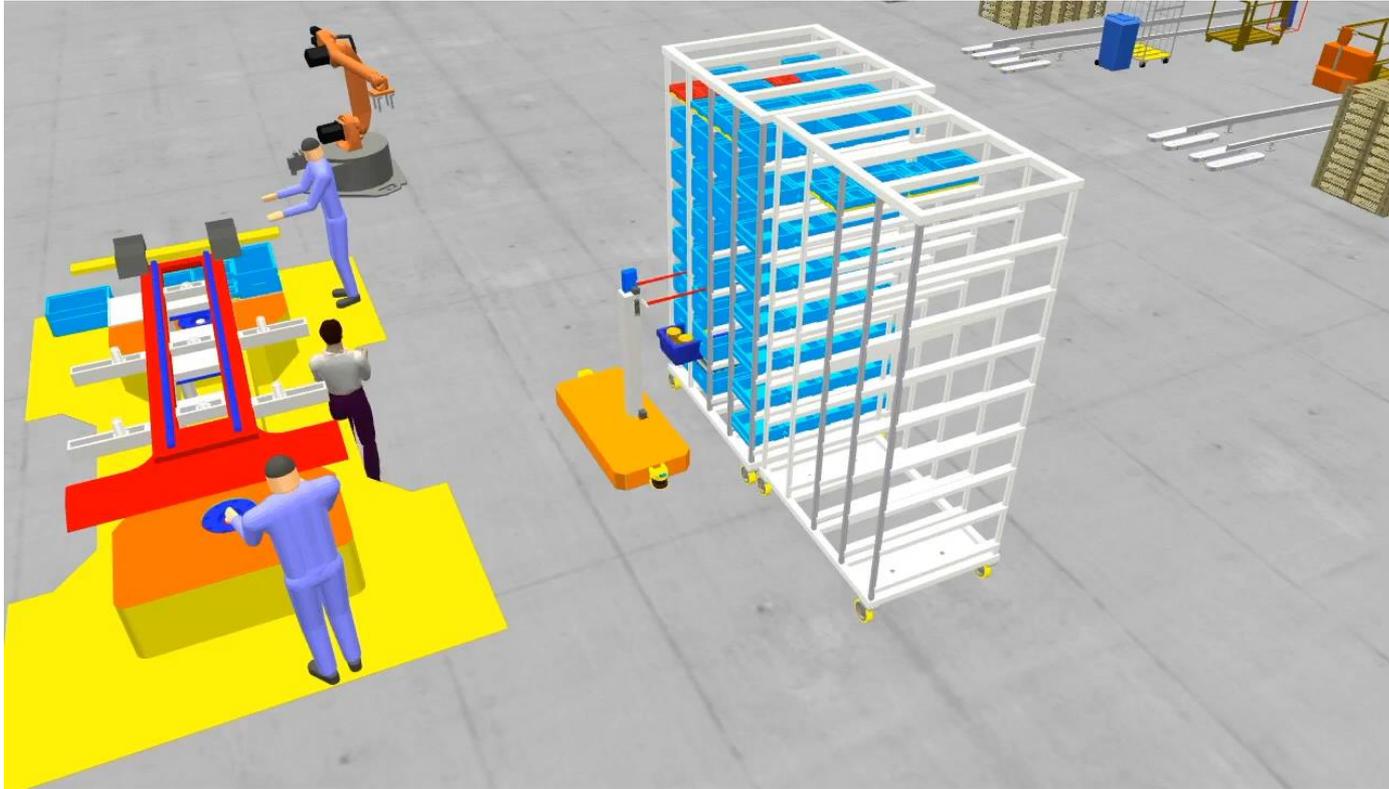

## Rack-concept

## Simulation rack-concept

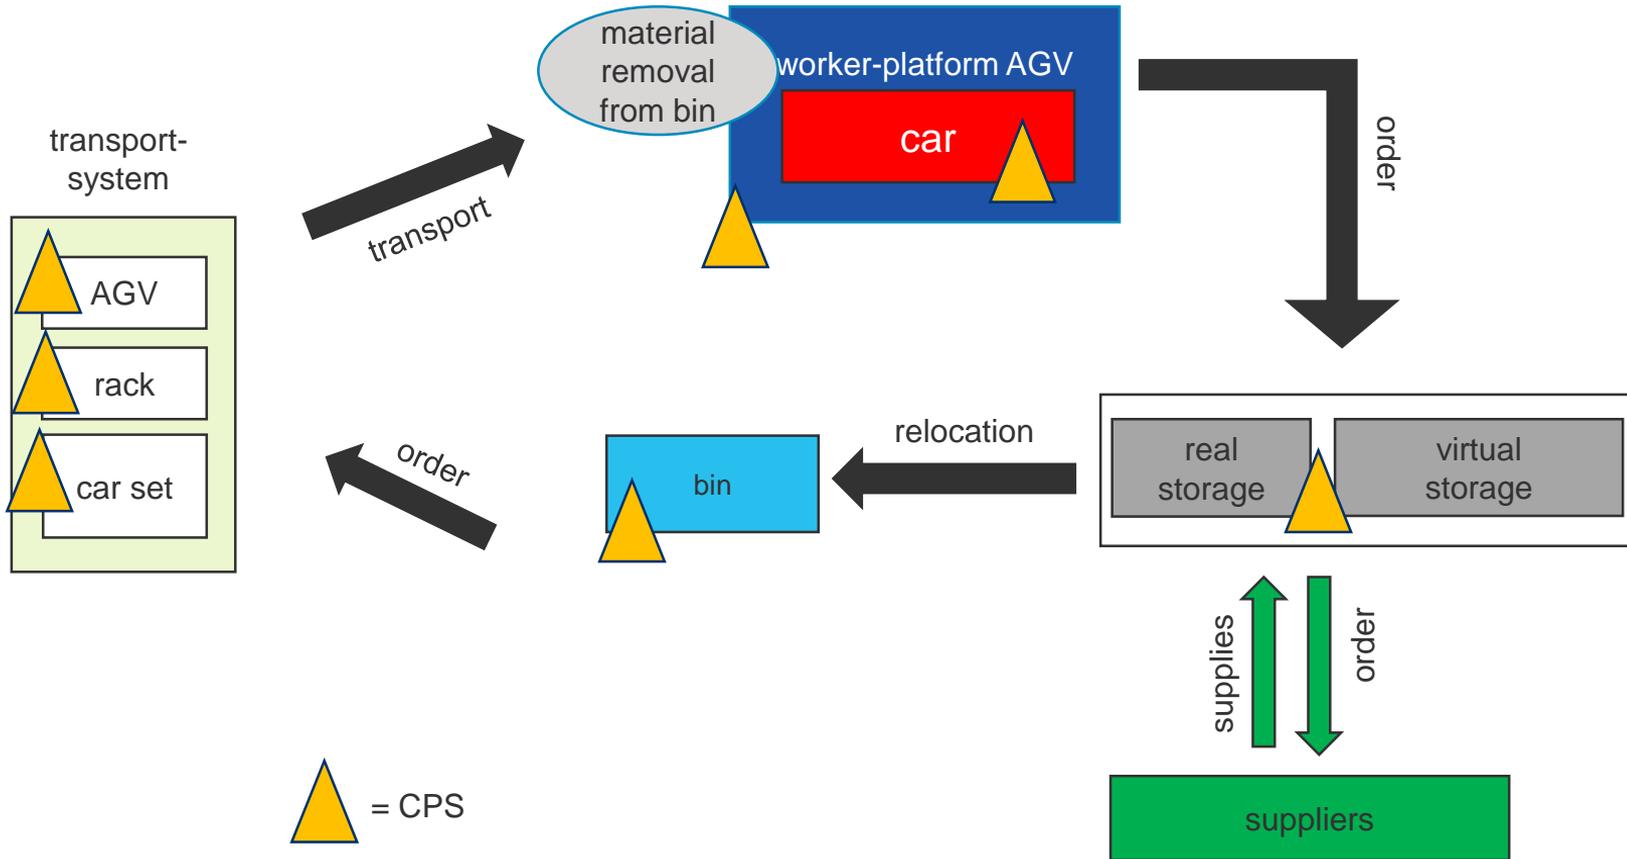

## Prototype rack concept

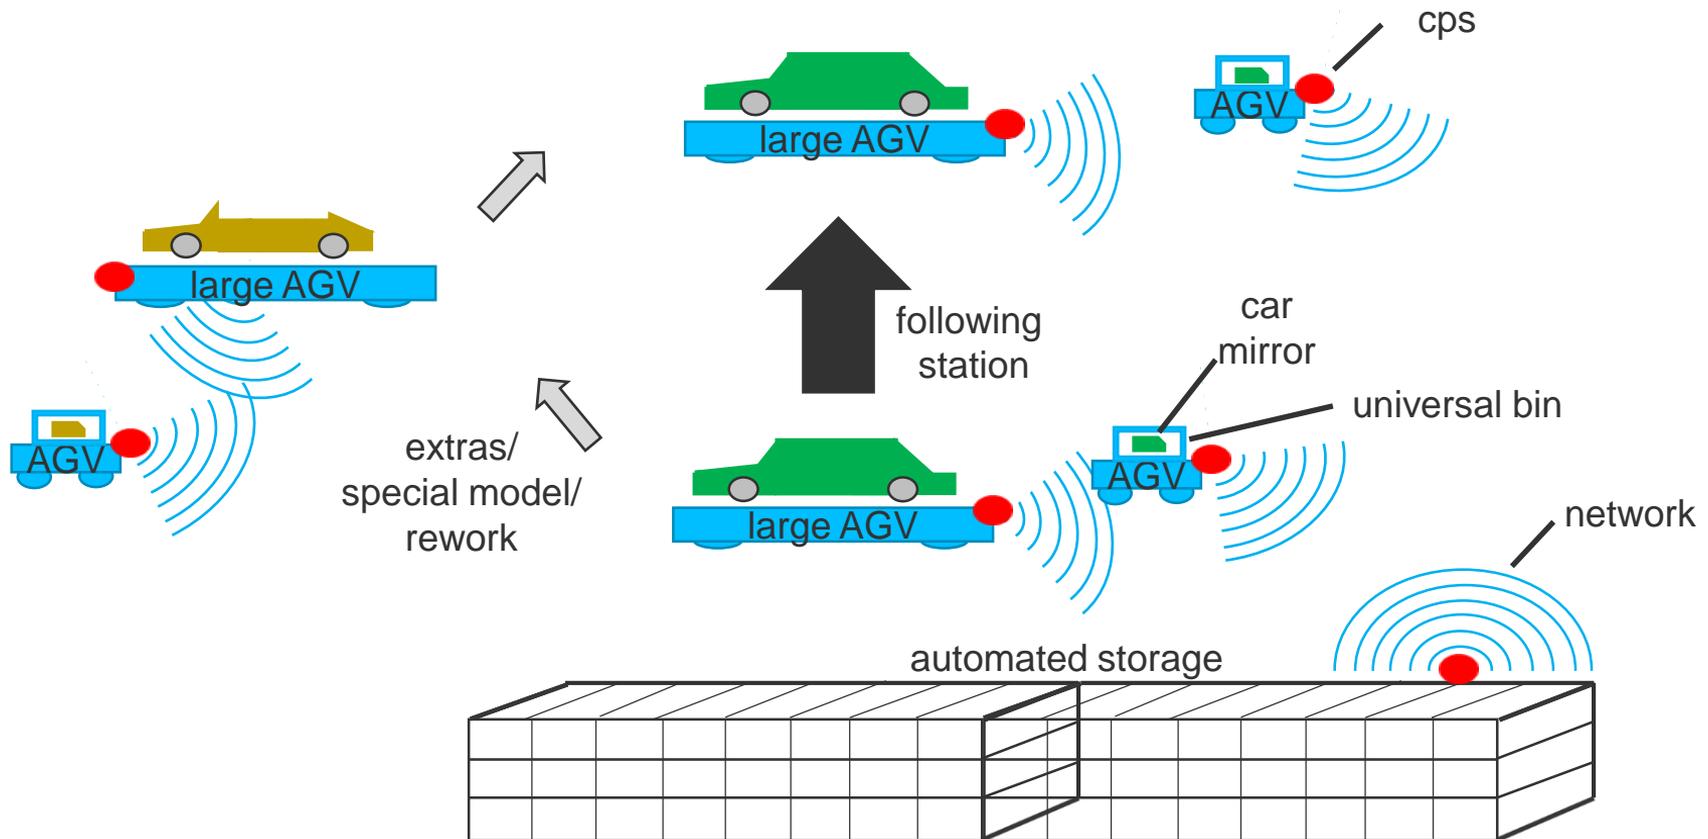

# Linked logistics for the new production

## Linked logistics for the new production

## Summary and Outlook

- Analysis of today's situation
- Development of new logistics concepts
- Concept for connected logistics supporting future of production
- Development of a selection tool for automated rating of logistics concepts

## Thank you

## KEY DATA

### Headquarter

## KNAPP AG

Hart bei Graz

Founded: 1952  
Company premises: 120,000 m<sup>2</sup>  
Employees at the headquarters: 2,000

Employees worldwide: 3,000  
Locations and offices: 33  
Turnover 15/16: 582 million euros  
Export quota: 98 %

### Production in numbers

Screws/year: 7.8 million  
Shuttles/year: 3,100  
Lifts/year: 210  
Switch cabinets/year: 1,700  
Powder coating/year: 44 t  
Coated surface/year: 181,000 m<sup>2</sup>

### Certifications

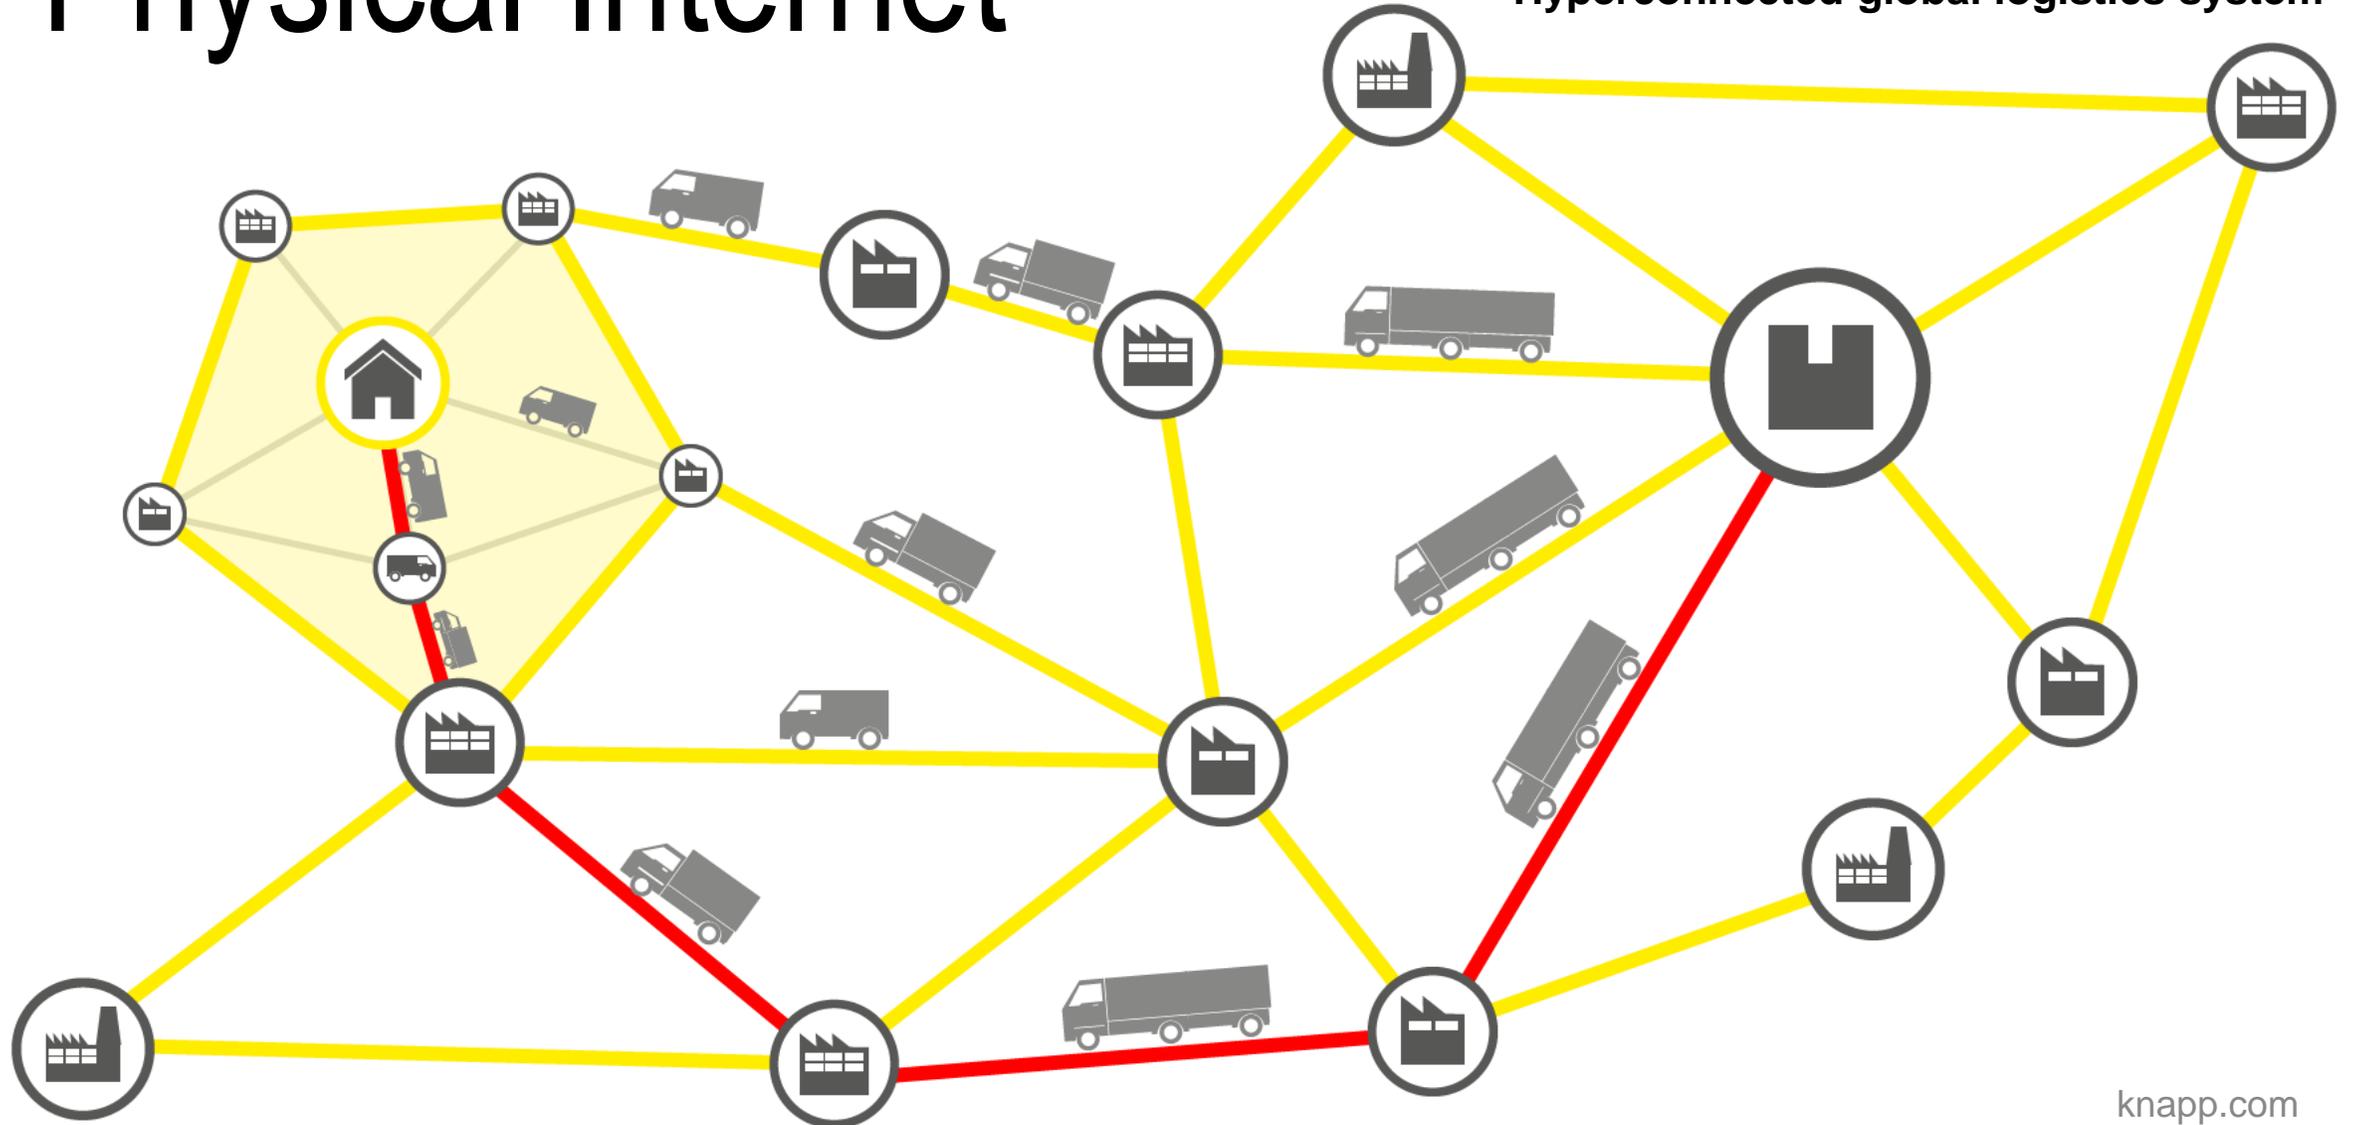

Quality management  
ISO 9001

Occupational Health and Safety  
OHSAS 18001

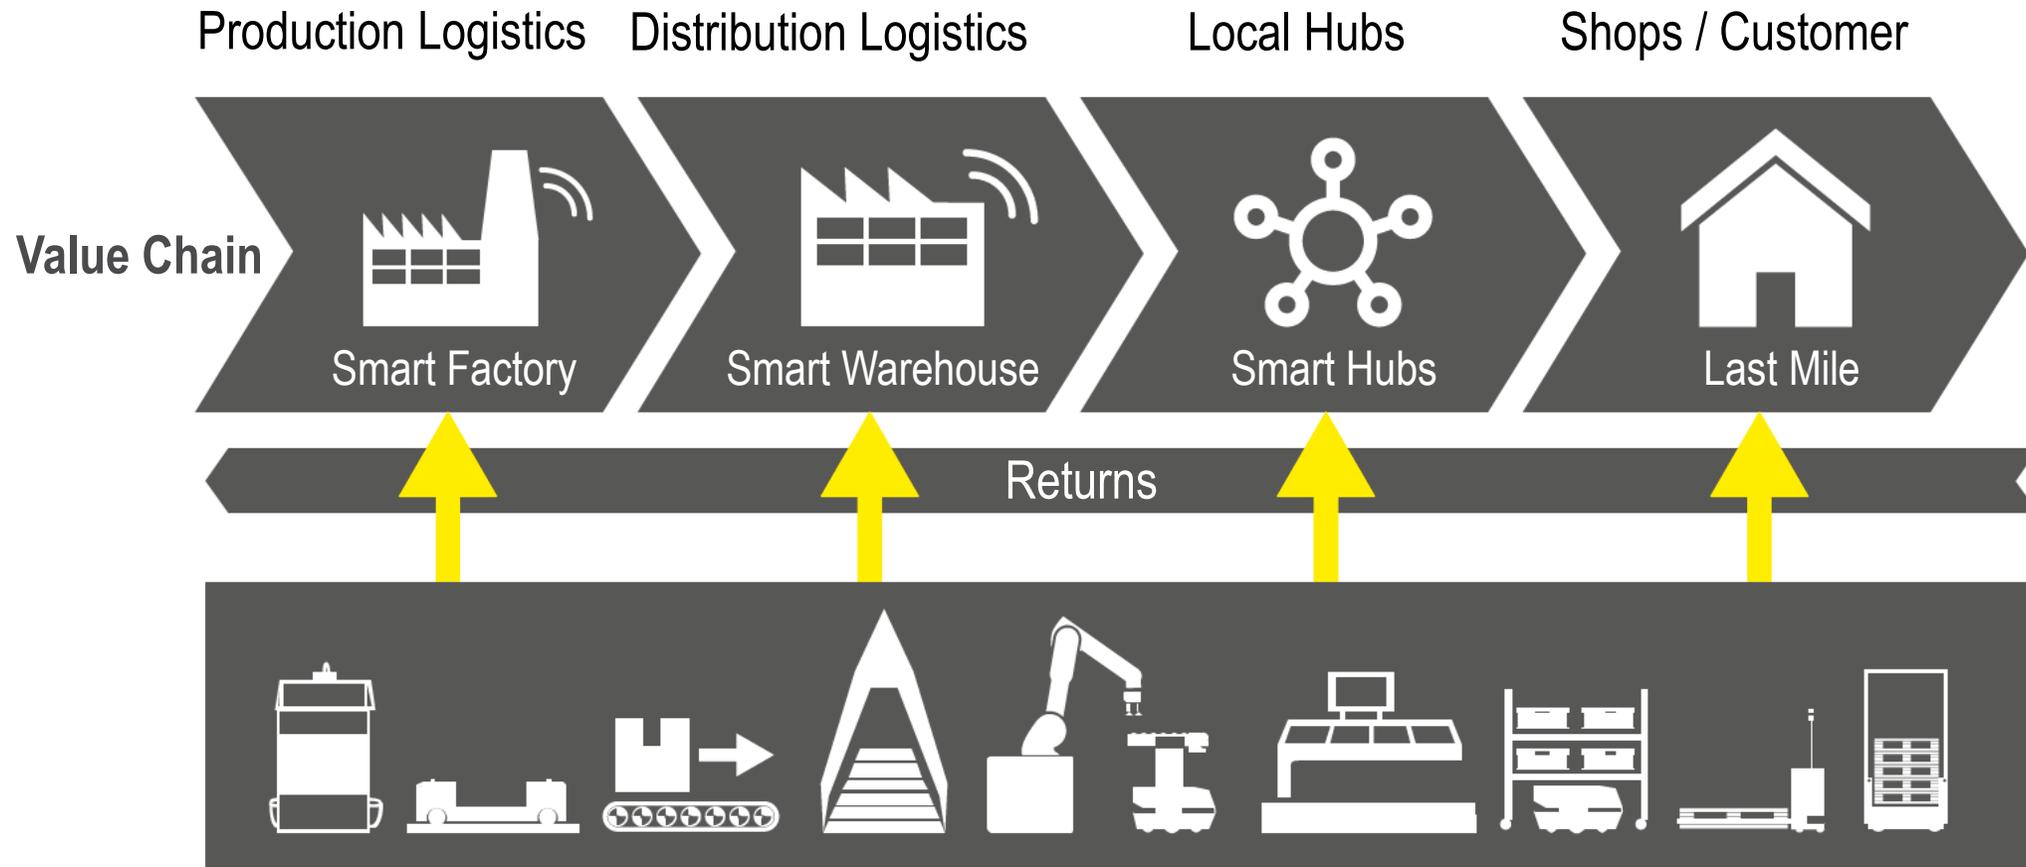

Environmental management  
ISO 14001

Storage System

# Storage systems

## Selecting a suitable storage system

- Load carriers: pallets, cartons, single item...
- Weight: 1,000kg, 50kg, 10g...
- Spatial requirements (height, floor space)
- Storage and retrieval capacity
- Sequence requests
- Storage Locations
- **Necessary flexibility of the system**
